Athletes by Age and Gender

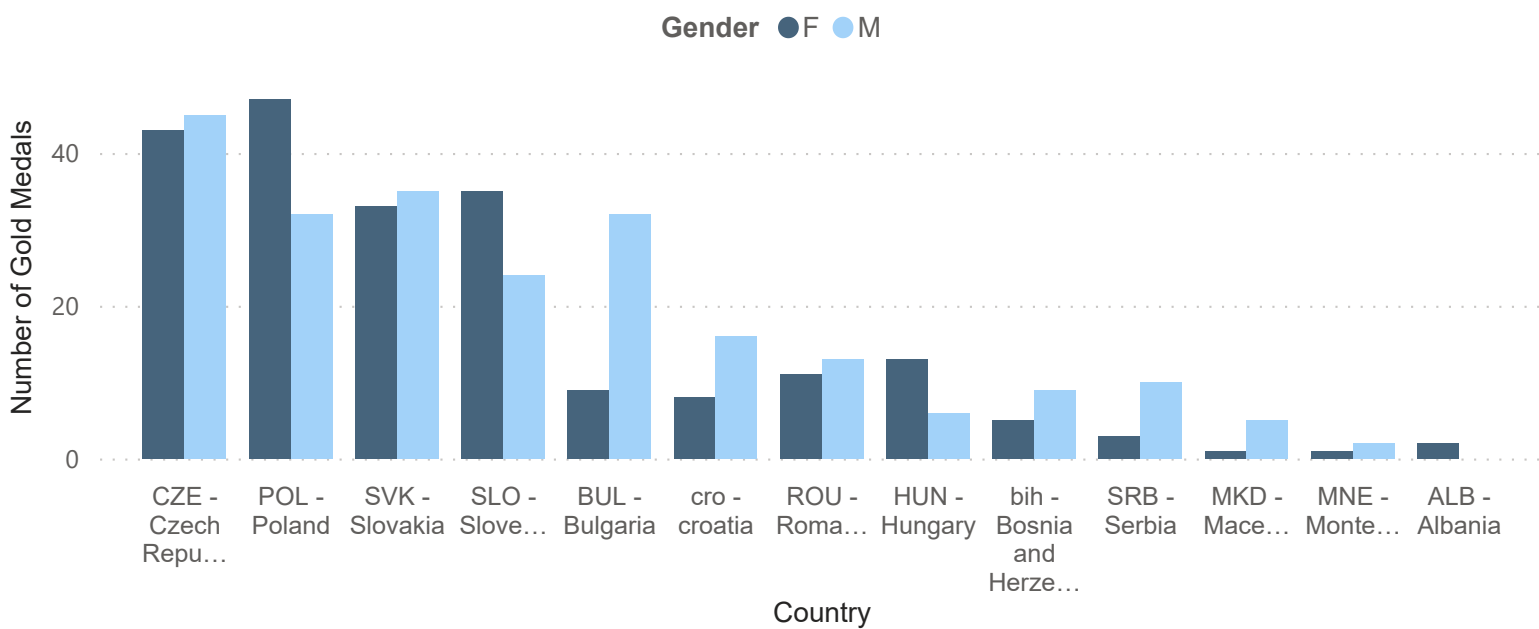

Athletes by Gender

Total Athletes by Country

Gold Medals Won by Country and Gender

Insights

- The focus of the dashboard is to enable the viewer to dive deeper into who the Winter Olympic athletes are by reviewing their age, gender, nationality and the top-performers based on gold medals won.
- The countries that have the most athletes and the most gold medals are in the North America, Eastern and Western Europe regions. These countries also have an almost even split between Female (46%) and Male athletes (54%).
- Alternatively, Asia is a key area of interest because China and Japan had the highest number of athletes for the region, and had a majority of gold medals come from females. The only other countries that had a similar outcome were Ukraine, Poland and Slovenia.
- Across all regions, male athletes tend to have the largest age spread and the oldest athletes tend to be males. The oldest male athlete is 55 and from Mexico.
- Across all countries, the Winter Olympics athletes tend to peak at age 24.
